Excerpt from A Handbook of Pathological Anatomy and Histology: With an Introductory Section on Post-Mortem Examinations and the Methods of Preserving and Examining Diseased Tissues In the third edition of this work, the same objects have been kept in view as in the second edition. It is intended that the student and the practitioner shall find in it the information which they need to enable them to perform autopsies, to preserve the tissues, to prepare them properly, and to examine them with the microscope. The work, therefore, comprises instruction in the methods of making post-mortem examinations, of preserving diseased tissues, of preparing them for microscopical examination, and of cultivating and examining bacteria. It also gives an account of the lesions of the different parts of the body, of the general diseases, of violent deaths, and of poisoning; of the changes produced by inflammation and degeneration; and of the structure of tumors. All the drawings have been made by the authors. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. the Post-Mortem Room Regular attendance in the post-mortem room is essential for a practical knowledge of disease. Morbid anatomy deals with facts. Theories as to the nature and causation of disease may come and go; experimental pathology may establish or dispel particular views but a study of morbid anatomy is a necessity to each generation of students, and should be as much a subject of personal inquiry to the senior student as normal anatomy is supposed to be to the junior. Seeing, with most, is not only believing, but remembering, and, to a considerable extent, understanding. The atmosphere of the post mortem room whets the appetite for investigation into the problems of disease. The revelations of the pathological department not only indicate what disease can accomplish, but explain clinical features, suggest lines for rational treatment, and oftentimes encourage a healthy and reasonable optimism by demonstrating the wonderful compensatory powers of nature.
