Growing research shows that many children from immigrant and refugee families are not doing well in school, due in part to linguistic and

cultural disadvantages. Teaching dual-language learners requires cultural sensitivity, an understanding of language acquisition, and intentional teaching strategies. Combining research and techniques, this resource helps early childhood educators support dual-language learners as they develop the skills necessary for school readiness and success.

With its extensively updated text, self-instructional student workbook, and thoroughly revised instructor's resource manual brimming with tips and handouts, this complete package is designed to meet all the needs of paramedic instructors and students alike.

This scenario-based text provides answers to urgent and emergent questions in acute, emergency, and critical care situations focusing on the electrocardiogram in patient care management. The text is arranged in traditional topics areas such as ACS, dysrhythmia, etc yet each chapter is essentially a question with several cases illustrating the clinical dilemma – the chapter itself is a specific answer to the question. This is a unique format among textbooks with an ECG focus. The clinical scenarios cover the issues involved in detecting and managing major cardiovascular conditions. Focused, structured discussion then solves these problems in a clinically relevant, rapid, and easy to read fashion. This novel approach to ECG instruction is ideal for practicing critical care and emergency physicians, specialist nurses, cardiologists, as well as students and trainees with a special interest in the ECG.

This fully updated and revised 12th edition of the highly acclaimed textbook on health care delivery provides graduate and undergraduate students with a comprehensive survey of health care in the United States ranging in topics from the organization of care, the politics surrounding healthcare in the United States, to population health and vulnerable populations, healthcare costs and value, health care financing, and health information technology. Chapters provide thorough coverage of the rapid changes that are reshaping our system and the extent of our nation's achievement of health care value and the Triple Aim: better health and

The interest of researchers, clinicians, practitioners and surgeons in critical care medicine is growing. Clinical pharmacology and new

technologies now allow more appropriate therapies, and the commitment of all those involved in this field is of fundamental importance for reaching high interventional standards, in both the prevention and treatment of critical conditions, but also for satisfying the concept of cost-effectiveness in critical care. In this volume advances in critical care medicine are described, including the application of new technologies in the clinical setting, the full integration of computers and informatics, and the continual training of physicians and technicians.

Edited by expert academics and educators, Brett Williams and Linda Ross, and written by content specialists and experienced clinicians, this essential resource encourages readers to see the links between the pathophysiology of a disease, how this creates the signs and symptoms and how these should be managed in the out-of-hospital environment. Additionally, Paramedic Principles and Practice 2e will arm readers with not only technical knowledge and expertise, but also the non-technical components of providing emergency care, including professional attitudes and behaviours, decision-making, teamwork and communication skills. Case studies are strategically used to contextualise the principles, step readers through possible scenarios that may be encountered and, importantly, reveal the process of reaching a safe and effective management plan. The case studies initially describe the pathology and typical presentation of a particular condition and progress to more-complex and less-typical scenarios where the practitioner faces increasing uncertainty. The only paramedic-specific text designed for Australian and New Zealand students and paramedics Progressive case studies that bridge the gap from principles to practice More than 40 essential pathologies covering common paramedic call-outs Covers both technical and non-technical skills to develop the graduate into expert clinician New chapters, including: Paediatric patients; Child abuse and intimate partner violence; Geriatric patients; Tropical conditions; Mass casualty; Interpersonal communication and patient-focused care; Evidence-based practice in paramedicine; Pharmacokinetics and pharmacodynamics New case studies on major incidents and major trauma Focused 'Implications for' boxes specific to considerations including geriatrics, cultural diversity, communication challenges 'Summary of therapeutic goals' included with each case study Learning outcomes added to open each chapter Considered revision of pathophysiology across all chapters

First multi-year cumulation covers six years: 1965-70.

Terrorism is no longer something that only happens to other countries. Attacks on US soil in the 1990's brought the reality of terrorism home and the Sept 11th tragedy let us know that the United States is a high priority target. The goal of today's terrorist is body count, and while traditional bombings have served them in the past, the allure of killing thousands of people with a very small amount of biological or chemical agent will prove irresistible. Our only defense on the front line is a well-prepared emergency response team. The key to an effective terrorist response is to understand and contain the hazardous materials involved. Counter-Terrorism for Emergency Responders, Second Edition meticulously details the characteristics, actions, identification, containment, and emergency treatment of all types of agents. Drastically updated from the 1999 edition, chapter after chapter is packed with new information on chemical agents, biological agents, and explosive, nuclear, and incendiary devices. Using his 26 years of experience in emergency services and his skills as a hazardous materials consultant in more than 15 states, the author prepares the first responder to handle everything from re-establishing control and on-scene triage to investigating the crime. Including information on pre-incident and avoidance tactics, the author provides new monitoring and detection techniques, protective equipment and decontamination, and an extensive list of resource organizations and training opportunities. The worst may never happen to your community, but will you be prepared if it does?

The management of critically ill patients has, in the past few years, been a discipline at the forefront of development which continues to make progress with the support of basic and clinical research in the broadest sense. The application of biotechnology in this particular area has revealed itself to be essential in an attempt to provide the best interpretation of the bio-humoral and functional alterations present in a long series of often complex clinical conditions. The care of the critically ill is also at the forefront in the application of increasingly sophisticated clinical monitoring systems that also contribute to standardizing certain procedures, establish guidelines, and evaluate the efficacy of therapeutic interventions and their costs.
