The Educational Policy Improvement Center (EPIC) conducted a crosswalk between the Deeper Learning Skills (DLS) and the Common Core State Standards (CCSS). The purpose of the crosswalk was to understand the ways in which strategies for deeper learning relate to the CCSS. This comparison was not solely or simply an alignment study, although some elements of content alignment methodology were employed in the first round of reviews. Alignment studies are used to determine matches between sets of standards or between a set of standards and one or more assessments. Because the DLS are not a set of content standards, nor are they an assessment, it is not appropriate to use alignment methodology exclusively when exploring relationships between the DLS and content standard systems such as the CCSS. Overall, findings indicate that the CCSS are a strong foundation for learning and teaching the deeper learning skills as defined by the Hewlett Foundation. Deeper learning skills were consistently identified as being essential contributors to student mastery of the CCSS, even in areas with less than direct correspondence. Appended are: (1) The Common Core State Standards Included in the Crosswalk; and (2) Crosswalk Analysis of Deeper Learning Skills to Common Core State Standards. (Contains 6 tables and 3 footnotes.) The Common Core State Standards for English Language Arts created new challenges for teachers and pre-service instructors. Self-regulated learning, using one's thoughts, feelings, and behaviors to reach goals, can help students become independent, self-directed learners. This book provides educators the support they need to apply the principles of self-regulated learning in their teaching for success with the Common Core. In this book, Marie C. White and Maria K. DiBenedetto present information on how to apply academic self-regulation by integrating two models: one which addresses how students develop self-regulatory competence, the other which focuses on the various processes within the three phases of self-regulated learning. In addition, Self-Regulation and the Common Core provides specific lesson plans for grades K-12, using the standards and the integrated framework to promote higher order thinking and problem-solving activities.

One of the major domestic policy issues of our time is whether our nation can provide a more effective educational experience for our children. Economists have stressed that the quality of our educational system eventually defines the ability of our workforce, which in turn affects our competitive position in the world market. This issue has earned increasing attention in light of recent reports that students in many nations perform at higher levels of educational competence than children in America's schools. Inspiring Greatness in Education describes the 21st Century Schools program (21C), a whole-school reform model developed by Edward Zigler over 20 years ago and since then has been in a constant state of testing, implementation, and scaling up. The goal of 21C is to promote optimal child development, which should become manifest in sound educational performance. In practice, 21C provides preschool education as well as good-quality child care before and during the school years, in combination with a

number of other family supports. This book will provide an in-depth case study examination of the experience of the Independence School District in Independence, Missouri. The Independence School District embraced School of the 21st Century concepts in 1988, becoming the first urban school district in the nation to do so. This book reveals and documents Independence School District's success as a national model for 21C programming, as well as the experiences, testimonials and opinions of parents, students, teachers, administrators and community officials. By focusing on the impetus and history of the 21C concept, its organic evolution and its applications at the Independence School District, this book is designed to inform, educate, and inspire all who read it and to serve as a model for other school districts that want to achieve similar successes.

The Educational Policy Improvement Center (EPIC) conducted an investigation of the Intersegmental Committee for the Academic Senates (ICAS) Statements of Competencies for Mathematics and Academic Literacy. The purpose of this work is to understand how the ICAS competencies relate to college and career readiness, as represented by the augmented Common Core State Standards (CCSS) adopted by the California State Board of Education (SBE) on August 2, 2010. This study investigated a crosswalk analysis between (a) the Academic Literacy (ELA) ICAS competencies and the CCSS ELA Anchor Standards and (b) the mathematics ICAS competencies and the CCSS Standards for Mathematical Practice and the High School Mathematics Standards at the cluster level. Overall, the study finds that the ICAS competencies do relate to the augmented Common Core State Standards. This study also reveals the absence of certain "habits of

mind" and English as a Second Language (ESL) standards in the CCSS ELA standards, and the absence of discrete mathematics and calculus in the augmented CCSS mathematics standards. The ICAS framework is broader than the CCSS ELA standards in addressing additional components related to supporting ESL students and includes key cognitive strategies all students need to be successful in postsecondary settings. The results of this study also raise the issue of the level of desired preparation in mathematics for high school graduates in California. The CCSS mathematics standards strongly relate to the ICAS competencies identified as "essential" for all students, but have gaps with the ICAS competencies deemed "desirable" for all students. Appended are: (1) Standards and Competencies; and (2) Competencies and Frequencies of Ratings. (Contains 5 figures, 17 tables, and 5 footnotes.) Environmental education (EE) and education for sustainable development (ESD) are asserting their growing role in curricula around the world, yet how deeply embedded are they in the learning systems of the Pacific nations? Building on an earlier analysis in China and Taiwan, this volume expands its purview to examine the quality and extent of environmental and sustainable development education in a number of countries in the Asia-Pacific region, including China itself, Taiwan, South Korea, Japan and Indonesia. As well as offering detailed national analyses provided by Asian-Pacific academics and professionals, this work includes examples in the US and Canada and an introduction that assesses the contrasting challenges and positive commonalities among diverse education systems. The chapters reflect leading-edge practice, innovation, and depth of experience and at the same time as detailing locally relevant and culturally appropriate strategies they also provide clear models and strategies for expanding the application and influence of education for sustainable development elsewhere. In doing so, they mirror the global nature of environmental issues as well as the local nature of the solutions.
