OMEGA Speedmaster Professional - the Moonwatch - has done things that no other timepiece has done and it's been worn in places that only a few human beings have been." - Captain Eugene Cernan, 'Last man on the moon' There are very few timepieces in the world that deserve a definitive and comprehensive book such as this one. The OMEGA Speedmaster Professional Moonwatch is one of them. Initially designed for automobile racing teams and engineers, the Omega Speedmaster embarked on a very different trajectory when NASA chose it to accompany astronauts heading for the Moon in 1965. Its involvement in the space adventure has propelled the Moonwatch to the top of the list of celebrated timepieces. After years of research and observation, the authors present a complete panorama of the Moonwatch in a systematic work that is both technical and attractive, making it the inescapable reference book for this legendary watch. This third edition marking the 60th anniversary of the Speedmaster has been enriched with numerous new features including a 16-page gallery of astronauts and their Speedmaster, QR codes to extend your exploration and a detailed story of a vintage Speedmaster.

most useful information required to understand titanium and its alloys. The author provides a review of the significant features of the metallurgy and application of titanium and its alloys. All technical aspects of the use of titanium are covered, with sufficient metals property data for most users. Because of its unique density, corrosion resistance, and relative strength advantages over competing materials such as aluminum, steels, and superalloys, titanium has found a niche in many industries. Much of this use has occurred through military research, and subsequent applications in aircraft, of gas turbine engines, although more recent use features replacement joints, golf clubs, and bicycles. Contents include: A primer on titanium and its alloys, Introduction to selection of titanium alloys, Understanding titanium's metallurgy and mill products, Forging and forming, Castings, Powder metallurgy, Heat treating, Joining technology and practice, Machining, Cleaning and finishing, Structure/processing/property relationships, Corrosion resistance, Advanced alloys and future directions, Appendices: Summary table of titanium alloys, Titanium alloy datasheets, Cross-reference to titanium alloys, Listing of selected specification and standardization organizations, Selected manufacturers, suppliers, services, Corrosion data, Machining data.

Eggs play a very important role in the human diet and nutrition as it is an affordable nutrient rich food product. An egg contains highly digestible proteins, lipids, minerals and vitamins. Until 1988, Europe was the largest producer of eggs. It was surpassed by Asia in early 1990s (IEC, Economic report -2014). The European production volumes have been decreased due to the collapse of political and economic systems in Russian Union and Eastern Europe. The major egg producing countries are China, US, India, Japan and Mexico. The egg consumption in China is majorly as table eggs and only 1% of eggs are broken and further processed. In US, 30% of the consumption is in the form of processed eggs like liquid, frozen etc. The per capita consumption of eggs in India is only 43 against the prescribed consumption of 180 eggs per year per head by National Institute of Nutrition. The less consumption is majorly due to the vegetarian population and unorganized farming.
