Communication, Intimacy, and Close Relationships offers an account of the nature of intimate relationships and their effects on people's self-concepts. The development and maintenance of intimate relationships are examined, along with people's motives and goals in pursuing intimacy; the nature of social exchanges in intimate relationships; and the consequences for individuals who find themselves socially isolated. The critical role of communication in intimate relationships is given emphasis. Comprised of seven chapters, this book begins with a discussion on the role of self-disclosure in intimate relationships as well as the risks that individuals incur when they self-disclose. The next chapter presents a cognitive interaction model of the nature of intimacy and intimate relationships within the context of cognitive-social learning theory and a systems theory approach to communication. The effect of people's motives on relationships is then considered, together with the role of two fundamental human motives - power and intimacy - on love and friendship. The remaining chapters focus on the importance of the identification process - that is, how

people fix their own and others' identities in social interaction - in developing relationships; patterns of nonverbal exchange in close relationships; how and why loneliness occurs; and the nature of social exchange processes in intimate relationships. The book concludes with an epilogue that provides a perspective on why people may find it difficult or easy to form intimate relationships. This monograph should be a valuable resource for psychologists and sociologists.

August 1969, Belfast. A campaign for civil rights in Northern Ireland that had begun less than two years previously degenerates into inter-communal violence. The three days of 13, 14 and 15 August changed the course of Northern Irish history by radicalising a whole generation of Catholic youths. On the Protestant side, the Ulster Volunteer Force (UVF) – revived in 1966 but barely mentioned outside Shankill Road – was in full conflict by 1972. How did the events of August 1969 radicalise the emerging youth of both sides of the religious divide? How did they drive an otherwise indifferent generation to carry out some of the most heinous crimes in Irish history and become embroiled in the longest period of Irish 'Troubles' to date? In Belfast '69, Andrew Walsh uncovers the truth by interviewing many from both sides – the young men who joined the numerous 'armies' that sprung up in the wake of that fateful August. Client anger is a perennial problem for a range of professionals working in clinical settings. Working with Anger presents an alternative strategy to the most common approach, cognitive behavioural therapy (CBT), exploring instead how anger can be tackled from a personal constructivist perspective. It provides a conceptual framework and practical advice on the clinical issues of working with anger, including case study examples, service user perspective, a philosophical and developmental underpinning, and suggested ways of preventing anger development. Ways of working with anger are illustrated, including: * Group-based treatments * Individual treatment * Working with adults * Working with children and adolescents * Working with families * Gender and anger * Methods of evaluating anger programmes This practical volume will enable clinicians to set up, run and evaluate their own anger programmes using the constructivist approach. It will therefore be a valuable resource for professionals such as clinical and forensic psychologists, psychiatrists, psychotherapists, nurses and social workers.

My interest in nonverbal behavior has remained constant for over 15 years. I think this has been the case because nonverbal behavior has proved a very fascinating and challenging topic. Others might suggest that I am just a slow learner. With enough time in any area, however, one begins to feel that he or she has some special insights to offer to others. About the time that I was struck with that thought, approximately two and a half years ago, I was developing the first version of my sequential functional

model of nonverbal exchange. It seemed to me that the functional model might provide a very useful framework for a book discussing and analyzing nonverbal behavior. I did not want (nor do I think I had the patience) to write a comprehensive review of research on nonverbal behavior. Other works, such as Siegman and Feldstein's (1978) edited *Nonverbal Behavior and Communication*, and Harper, Wiens, and Matarazzo's (1978) *Nonverbal Communication: The State of the Art*, have provided excellent reviews of the research on nonverbal behavior. Instead, what I have tried to do in this book is to use nonverbal behavior as a vehicle for discussing social behavior. In a very real sense, this analysis of nonverbal behavior is a means to an end, not an end in itself. A consequence of this approach is that this review is a selective one, unlike the comprehensive works mentioned earlier.

Plautus, Rome's earliest extant poet, was acclaimed by ancient critics above all for his mastery of language and his felicitous jokes; and yet in modern times relatively little attention has been devoted to elucidating these elements fully. In *Funny Words in Plautine Comedy*, Michael Fontaine reassesses some of the premises and nature of Plautus' comedies. Mixing textual and literary criticism, Fontaine argues that many of Plautus' jokes and puns were misunderstood already in antiquity, and that with them the names and identities of some familiar characters were misconceived. Central to his study are issues of Plautine language, style, psychology, coherence of characterization, and irony. By examining the comedian's tendency to make up and misuse words, Fontaine sheds new light on the close connection between Greek and Roman comedy. Considerable attention is also paid to Plautus' audience and to the visual elements in his plays. The result is a reappraisal that will challenge many received views of Plautus, positioning him as a poet writing in the Hellenistic tradition for a knowledgeable and sophisticated audience. All quotations from Latin, Greek, and other foreign languages are translated. Extensive indices, including a "pindex," facilitate ease of reference among the many jokes and plays on words discussed in the text.

Bringing together contributions from leading U.S. and international scholars, it presents integrated coverage of a variety of approaches-ranging from traditional experiments to postmodern analyses. Research on the mental abilities of chimpanzees and bonobos has been widely celebrated and used in reconstructions of human evolution. In contrast, less attention has been paid to the abilities of gorillas and orangutans. This 1999 volume aims to help complete the picture of hominoid cognition by bringing together the work on gorillas and orangutans and setting it in comparative perspective. The introductory chapters set the evolutionary context for comparing cognition in

gorillas and orangutans to that of chimpanzees, bonobos and humans. The remaining chapters focus primarily on the kinds and levels of intelligence displayed by orangutans and gorillas compared to other great apes, including performances in the classic domains of tool use and tool making, imitation, self-awareness, social communication and symbol use. All those wanting more information on the mental abilities of these sometimes neglected, but important primates will find this book a treasure trove.
