De drie delen van het hoofdwerk van Hannah Arendt nu eindelijk in één boek. ‘Het leven van de geest’ is het laatste hoofdwerk van Hannah Arendt. In dit boek ontvouwt ze haar ideeën over de mogelijkheden van de menselijke geest. Ze onderscheidt drie capaciteiten die iedereen bezit: denken, willen en oordelen. Tot haar dood bleef ze aan dit opus werken. Van het laatste deel, dat onvoltooid is gebleven, is hier het concept opgenomen. Dit is internationaal gezien de eerste editie die al het materiaal in één band samenbrengt: een filosofische sensatie van de eerste orde.

Boston University Professor Malcolm David Eckel takes us on a contemporary quest to discover the essential meaning behind the Buddha's many representations. Truth is increasingly marginalized. Powerful news interests, social media and political orators all seem to point to the idea that the days of absolute Truth are past. Religions have always claimed to stand for a transcendent dimension to reality and to the idea of an absolute claim to Truth but, in the West, religion has been and is declining in influence. Fundamentalism is on the rise and this, combined with relativism, contributes to the current malaise. Peter Vardy has a passionate commitment to helping people think about key issues deeply, yet writes in a lucid and clear style. In Beyond the Cave he explains why claims to absolute Truth have become severely eroded but he also charts a way forward. Science and the Quest for Reality is an interdisciplinary anthology that situates contemporary science within its complex philosophical, historical, and sociological contexts. The anthology is divided between, firstly, characterizing science as an intellectual activity and, secondly, defining its social role. The philosophical and historical vicissitudes of science's truth claims has raised profound questions concerning the role of science in society beyond its technological innovations. The deeper philosophical issues thus complement the critical inquiry concerning the broader social and ethical influence of contemporary science. In the tradition of the 'Main Trends of the Modern World' series, this volume includes both classical and contemporary works on the subject.

Philosophy begins, Aristotle said, with wonder; it addresses the great questions of life. This process of self-discovery through philosophy leads one to ask questions not only about human existence but also about God. In Philosophy: The Quest for Truth and Meaning, Andrew Beards introduces readers to some key philosophical ideas "the mind's ability to know truth and reality, metaphysics, ethics, and questioning life's ultimate purpose "in order to guide them in philosophical reflection. By examining the development of philosophy, Beards demonstrates and makes a case for the interplay of faith and reason. Andrew Beards, PhD, is reader in philosophy and director of the distance-learning B.A. Philosophy and the Catholic Tradition program at Maryvale Institute, an international institute for philosophy and theology based in Birmingham, UK.

In the inquisitive spirit of Montaigne, and with the confessional scrutiny of St. Augustine, "MILE HIGH REDEMPTION" describes in personal language the path to "conversion"—from religion to responsibility and integrity. Clark's third book is a conscientious exploration of our most cherished commitments, one which relentlessly probes the legitimacy of the very Evangelical forces which seek to define him. We are not only drawn in, we "see" Clark's changes as he grapples with the pressures and aspirations of Christian salvation. Professor Phillip Fandozzi, 23 yr director of Liberal

Warm and genuine, always engaging, and at times hilarious, MILE HIGH REDEMPTION brings to life the intense drama within the youthful struggle to achieve the courage to be. *** *** Keuze uit het werk van de Duitse filosoof (1844-1900). Pleidooi van de 12e-eeuwse Spaans-Arabische wijsgeer voor een innige verbondenheid van geloof en verstand. The God-question plays its role in every philosophy, from antiquity to the present. This volume begins with man as the entry point of the question concerning transcendence. Then this question is directed toward God. The middle section of the book is dedicated to the arguments concerning divine existence. After the arguments for the reasonableness of belief in God, the text deals with the relationship of philosophical thought about God to living faith. Finally, the ways to a search for God carried out in trust, which certain thinkers have followed while recognizing its problems, are outlined. Norbert Fischer is professor of philosophy at the Catholic University of Eichstaett, Germany. In De grote vragen snijdt Donald Palmer de belangrijkste thema's aan die vanaf de Griekse oudheid centraal staan in de westerse filosofie zoals de reden van ons bestaan en de
begrippen vrijheid, kunst, politiek en ethiek. Aan de hand van ca. 500 door hem zelf gemaakte illustraties bespreekt Palmer op toegankelijke en humoristische wijze wat de grote filosofen over deze onderwerpen naar voren hebben gebracht. Hij maakt met zijn boek duidelijk dat waarlijk filosofisch onderzoek ons verrassende inzichten kan verschaffen en een bevrijdende ervaring kan zijn.

The Quest for Meaning explores the deep-seated human need to create a life that is meaningful. In an effort to understand this need, author William Cooney examines the works of philosophers from Plato to Sartre as well as the insights of artists, poets, writers, psychologists, and film-makers. He discusses the nature of humanness, creation, freedom, and choice, all of which are facets of a meaningful life. Cooney also addresses postmodernism, arguing that it does not offer real guidance for those seeking a life of significance. Maintaining that some ways of creating meaning are preferable to others, he concludes that it is up to each individual to craft a meaningful life and that this process must take place within a context of giving and receiving.

This book argues that the power of science as the most respected and authoritative world view is based on its superior material and organizational resources, not on its superior rationality. Fuchs approaches science as a social construct, and utilizing a theory of scientific organizations, he analyzes knowledge production in scientific fields--how they differ in their resources and how these differences affect how science is conducted. The book explains why certain fields produce science and facts, while others engage in hermeneutics and conversation; why certain specialities change through cumulation rather than fragmentation; and why some fields are relativistic while others are positivist in their self-understanding. This general theory of knowledge is applicable not only to science, but to all varieties of
professional groups engaged in knowledge production.
