This book addresses this gap and provides:

- A comprehensive account of the theory and practice of purchasing for health services across Europe
- An up-to-date analysis of the evidence on different approaches to purchasing
- Support for policy-makers and practitioners as they formulate purchasing strategies so that they can increase effectiveness and improve performance in their own national context
- An assessment of the intersecting roles of citizens, the government and the providers

The National Assessment of Educational Progress (NAEP), known as the nation's report card, has chronicled students' academic achievement in America for over a quarter of a century. It has been a valued source of information about students' performance, providing the best available trend data on the academic achievement of elementary, middle, and secondary school students in key subject areas. NAEP's prominence and the important need for stable and accurate measures of academic achievement call for evaluation of the program and an analysis of the extent to which its results are reasonable, valid, and informative to the public. This volume of papers considers the use and application of NAEP. It provides technical background to the recently published book, *Grading the Nation's Report Card: Evaluating NAEP and Transforming the Assessment of Educational Progress* (NRC, 1999), with papers on four key topics: NAEP's assessment development, content validity, design and use, and more broadly, the design of education indicator systems.

The Bankruptcy Abuse Prevention and Consumer Protection Act of 2005 (BAPCPA) limited the types and quantities of exempt household goods on which debtors could avoid certain liens. Part of the motivation for these changes was a perception that debtors were using household goods as collateral to obtain loans that they never intended to repay. This study found no changes in debtor or creditor behavior due to the new definition of household goods.

Making Shakespeare is a lively introduction to the major issues of the stage and print history, whilst also raising questions about what a Shakespeare play actually is. Tiffany Stern reveals how London, the theatre, the actors and the way in which the plays were written and printed all affect the 'Shakespeare' that we now read. Concentrating on the instability and fluidity of Shakespeare's texts, her book discusses what happened to a manuscript between its first composition, its performance on stage and its printing, and identifies traces of the production system in the plays we read. She argues that the versions of Shakespeare that have come down to us have inevitably been formed by the contexts from which they emerged; being shaped by, for example, the way actors received and responded to their lines, the props and music used in the theatre, or the continual revision of plays by the playhouses and printers. Allowing a fuller understanding of the texts we read and perform, *Making Shakespeare* is the perfect introduction to issues of stage and page. A refreshingly clear, accessible read, this book will allow even those with no expert knowledge to begin to contextualize Shakespeare's plays for themselves, in ways both old and new.

The genesis of this book began in 1979 with the publishing of the first edition of *Printing Estimating Principles and Practices*...This book has the same core objectives as the previous editions: to chronicle the way contemporary print providers estimate, cost, and price their work in light of the prevailing technologies they use and the business environments they must survive in. There remains a "how-to" component as well as a "theory" component in this text: "how-to" subjects such as estimating paper or press time or bindery costs and "theory" topics that include management information systems, activity-based costing, benchmarking, decision-

making tools, and important pricing issues and rules. Chapter 7 addresses how to estimate digital print using "click charge" methods and the process of building cost matrices for static and variable print, as well as estimating website development. There is a compact disc accompanying this book that contains a number of appendices with support items, including...a complete set of estimating problems with answers...and a comprehensive Glossary of Terms. This book provides international and cross-cultural perspectives on teacher effectiveness and examines the prominent philosophies of teaching and pedagogical practices that characterize teachers in selected countries. Fatigue of structures and materials covers a wide scope of different topics. The purpose of the present book is to explain these topics, to indicate how they can be analyzed, and how this can contribute to the designing of fatigue resistant structures and to prevent structural fatigue problems in service. Chapter 1 gives a general survey of the topic with brief comments on the significance of the aspects involved. This serves as a kind of a program for the following chapters. The central issues in this book are predictions of fatigue properties and designing against fatigue. These objectives cannot be realized without a physical and mechanical understanding of all relevant conditions. In Chapter 2 the book starts with basic concepts of what happens in the material of a structure under cyclic loads. It illustrates the large number of variables which can affect fatigue properties and it provides the essential background knowledge for subsequent chapters. Different subjects are presented in the following main parts: • Basic chapters on fatigue properties and predictions (Chapters 2–8) • Load spectra and fatigue under variable-amplitude loading (Chapters 9–11) • Fatigue tests and scatter (Chapters 12 and 13) • Special fatigue conditions (Chapters 14–17) • Fatigue of joints and structures (Chapters 18–20) • Fiber-metal laminates (Chapter 21) Each chapter presents a discussion of a specific subject.

First published in 1970. This book is concerned with the examination and assessment of the impact of changes in technology on companies in three selected industries: printing, steel and chemicals. Its main focus is on the employment and associated labour market effects of technological change; but part of the rationale for the study as a whole has been to relate these effects to the technological environment of each industry. Accordingly, a good deal of attention has been paid to the character of the innovations themselves and to their implications for the industries in general terms. This title will be of interest to students of Business Studies and Economics.
