Welcome to the proceedings of the 6th IEEE International Conference on Mobile Agents. MA 2002 took place in Barcelona, Spain and was co-located with the 4th International Workshop on Mobile Agents for Telecommunications Applications. Both events were held at the Universitat Pompeu Fabra, October 22–25, 2002. Mobile agents may be de?ned as programs that, with varying degree of - tonomy, can move between

hosts across a network. Mobile agents combine the notions of mobile code, mobile computation, and mobile state. Capabilities of mobile agents include: – Supporting unrealiable networks and disconnected operation – Counteracting low-bandwidth, high-latency communication links – Deploying newbehaviour (through mobile code) and recon?guring systems on-the-?y – Distributing processing load across systems – Improving survivability in the face of network and system failure. Given the above capabilities, mobile agents (while they may not be referred to as such) are nowbecoming accepted as a fundamental architectural construct for the design and development of complex adaptive systems that need to operate in highly dynamic environments. Mobile agents also support applications in several domains such as ubiquitous computing, grid computing, remote sensing, data mining, system management, and agile computing.

Topics • what this book is about, • its intended audience, • what the reader ought to know, • how the book is organized, • acknowledgements. Specifications express information about a program that is not normally part of the program, and often cannot be expressed in a programming lan guage. In the past, the word "specification" has sometimes been used to refer to somewhat vague documentation written in English. But today it indicates a precise statement, written in a machine processable language, about the purpose and behavior of a program. Specifications are written in languages that are just as precise as programming languages, but have additional capabilities that increase their power of expression. The termi nology formal specification is sometimes used to emphasize the modern meaning. For us, all specifications are formal. The use of specifications as an integral part of a program opens up a whole new area of programming - progmmming with specifications. This book describes how to use specifications in the process of building programs, debugging them, and interfacing them with other programs. It deals with a new trend in programming - the evolution of specification languages from the current generation of programming languages. And it describes new strategies and styles of programming that utilize specifications. The trend is just beginning, and the reader, having finished this book, will viii Preface certainly see that there is much yet to be done and to be discovered about programming with specifications.

In Group Music Therapy Alison Davies, Eleanor Richards and Nick Barwick bring together developments in theory and clinical practice in music therapy group work, celebrating the richness of what group analytic thinking and music therapy can offer one another. The book explores the dynamic elements of the processes that take place in both group analytic therapy and group music therapy, exploring both the

commonalities and the distinctive characteristics of the two modalities. To music therapists, psychotherapists and other arts therapists Group Music Therapy offers a body of knowledge and enquiry through which to understand the music therapy group process through some of the central proposals of group analysis; to group analysts it offers insight into the possibilities of non-verbal communication through improvised music and, more widely, invites thought in musical terms about the nature of events and exchanges in a therapy group. Links are made with group analytic theory as well as with other associated theoretical traditions, such as attachment theory and theories of early infant development. The book explores the history of group music therapy and the history of group analysis, looking both at core concepts and at more recent developments. Attention is also given to developmental issues, drawing upon theories of infant development and attachment theory and clinical vignettes drawn from music therapy practice with a wide range of patient groups illustrates these ideas. The book concludes with a discussion of the possibilities of co-therapy and other collaborative working and of the value of experiential groups in training. Group Music Therapy will be a key text for clinicians and students seeking to expand their theoretical thinking and enrich their practice, and offers a grounding in group analytic ideas to professionals in other disciplines considering referrals to group work.

Recent advances in technology such as cloud computing, recent industry standards such as RFID, bibliographic standards like RDA and BIBFRAME, the increased adoption of open source integrated library systems (ILS), and continued shift in users' expectations have increased the complexity of the decision regarding ILS for all types of libraries. • Addresses a key question: Should media centers and small libraries focus only on commercially available software, or would it be advantageous to choose open source software? • Provides an in-depth treatment of the systems development lifecycle (SDLC) and a six-phase systems analysis and design approach • Covers a wide range of topics, including open source software selection and evaluation, joining consortia, designing and developing in-house integrated automated library systems (ILS), usability principles and assessment methods, and project management

Hate Prejudice and Racism provides a comprehensive overview of the problems created by prejudiced attitudes, racist beliefs, and acts of discrimination, from the casual racial or ethnic joke to the unrestrained violence of a lynch mob. It addresses such topics as the nature of ethnicity, stereotyping, aggression, and hate groups and individuals who promote ethnic and racial hatred. Kleg's discussion of ethnicity and ethnic groups challenges us to reexamine the meaning of a multicultural society. He traces the history of race as a scientific concept and its use as a social concept designed to stigmatize and subordinate members of minority racial and ethnic groups. Chapters on prejudice, stereotyping, and discrimination scapegoating provide a foundation for the chapter on hate groups and haters, which includes in-depth descriptions of beliefs and activities of white-supremacist groups and individuals who promote racism and anti-Semitism. Finally, Kleg outlines implications of hate prejudice and racism for educators and all cultural workers, outlining suggestions on how to approach and study this important and controversial topic.

Summary The TOGAF 9 certification program is a knowledge-based certification program. It has two levels, leading to certification for TOGAF 9 Foundation and TOGAF 9 Certified, respectively. The purpose of certification to TOGAF 9 Certified is to provide validation that, in addition to the knowledge and comprehension of TOGAF 9 Foundation level, the Candidate is able to analyze and apply this knowledge. The learning objectives at this level therefore focus on application and analysis in addition to knowledge and comprehension.This Study Guide supports students in preparation for the TOGAF 9 Part 2 Examination, leading to TOGAF 9 Certified.This third edition contains minor updates to remove references to the TOGAF 8-9 Advanced Bridge Examination1 and also adds four bonus practice examination questions to Appendix B.It gives an overview of every learning objective for the TOGAF 9 Certified Syllabus beyond the Foundation level.

Foundations of Artificial Intelligence critically evaluates the fundamental assumptions underpinning the dominant approaches to AI. In the 11 contributions, theorists historically associated with each position identify the basic tenets of their position. They discuss the underlying principles, describe the natural types of problems and tasks in which their approach succeeds, explain where its power comes from, and what its scope and limits are. Note about this ebook: This ebook exploits many advanced capabilities with images, hypertext, and interactivity and is optimized for EPUB3-compliant book readers, especially Apple's iBooks and browser plugins. These features may not work on all ebook readers. We organize things. We organize information, information about things, and information about information. Organizing is a fundamental issue in many professional fields, but these fields have only limited agreement in how they approach problems of organizing and in what they seek as their solutions. The Discipline of Organizing synthesizes insights from library science, information science, computer science, cognitive science, systems analysis, business, and other disciplines to create an Organizing System for understanding organizing. This framework is robust and forward-looking, enabling effective sharing of insights and design patterns between disciplines that weren't possible before. Ideal as a textbook for undergraduates, the Core Concepts Edition includes new and revised content about the active resources of the "Internet of Things," and how the field of Information Architecture can be viewed as a subset of the discipline of organizing. This book describes and evaluates alternative approaches within Systemic Functional Linguistics (SFL) to representing the structure of language at the level of form. It assumes no prior knowledge of SFL, and can therefore be read as an introduction to current issues within the theory. It will interest any linguist who takes a functional approach to understanding language. Part 1 summarizes the major developments in the forty years of SFL's history, including alternative approaches within Halliday's own writings and the emergence of the "Cardiff Grammar" as an alternative to the "Sydney Grammar". It questions the theoretical status of the 'multiple structure' representations in Halliday's influential Introduction to Functional Grammar (1994), demonstrating that Halliday's model additionally needs an integrating syntax such as that described in Part 2. Part 2 specifies and discusses the set of 'categories' and 'relationships' that are needed in a theory of syntax for a modern, computer-implementable systemic functional grammar. The theoretical concepts are exemplified at every point, usually from English but occasionally from other languages. The book is both a critique of Halliday's current theory of syntax and the presentation of an alternative version of SFL that is equally systemic and equally functional.
