Traumatic brain injury (TBI) can seriously disrupt the social and communication skills that are basic requirements for everyday life. It is the loss of these interpersonal skills that can be the most devastating for people with TBI and their families. Although there are many books that focus upon TBI, none focus on communication and communication skills specifically. This book fills this important gap in the literature and provides information ranging from a broad overview of the nature of pathology following TBI and its effects on cognition and behaviour, through to the latest evidence about ways to assess and treat social and communication disorders. Much has changed in the field of communication disorders and TBI since the first edition of this book was published in 1999. There have been advances in neuroimaging, providing more accurate understanding of how the brain is damaged in TBI and also insights into its repair. There has been a burgeoning interest in social cognition, and advances in how communication is conceptualized, with a particular focus on the role of how context facilitates or impedes communicative ability. Most importantly, much has changed in the arena of rehabilitation. There is now a growing evidence base of treatments aimed at improving communication problems following TBI, new resources for accessing this information and renewed interest in different kinds of methods for demonstrating treatment effects. Bringing together a range of

expert international researchers interested in understanding the nature and treatment of TBI this book covers topics from understanding how the brain damage occurs, how it affects social and communication skills and how these problems might be treated. As such it will be of great interest to clinicians, postgraduate and undergraduate students and researchers in neuropsychology, speech and language pathology.

Published in August of 2008, WAIS-IV is the most widely used intelligence test for adults in the world. Substantive changes were made to the WAIS-IV from the WAIS-III leaving clinicians with questions as to how to use and interpret the measure effectively. Written by the creators of the new test, this book serves as the ultimate insider's guide to the new test, providing users with the kind of access to norms and data that would be unavailable to any subsequent book on clinical use of this measure. The book discusses the changes made between 3rd and 4th editions along with an FAQ and answers about use and interpretation. The reader is instructed how to interpret composite scores, and everything needed to use and interpret two entirely new composite scores: the General Ability Index (GAI), and the Cognitive Proficiency Index (CPI). This information does NOT appear in the manual accompanying the test. The second section of the book focuses on WAIS-IV use and interpretation with special clinical applications and populations, including with multicultural clients, in neuropsychological settings, with individuals experiencing psychological disorders, and with older adults. The editors and chapter authors have exclusive access to proprietary WAIS-IV data to run advanced analyses and provide information beyond what is offered in the WAIS-IV manual. Provides practical advice on scoring and administration Facilitates understanding WAIS-IV use with special populations Describes use of the WAIS-IV with WMS-II

Understanding Research in Clinical and Counseling Psychology, Second Edition, is written and designed for graduate students in the psychology and counseling fields, for whom the value of psychological research is not always readily apparent. Contributed to by experts in their respective fields, this text presents research as an indispensable tool for practice, a tool that is used every day to advance knowledge and improve assessment, treatment choice, and client outcomes. The book is divided into four logical parts: Research Foundations, Research Strategies, Research Practice, and finally, Special Problems. Included is a chapter that addresses one of the most important controversies, the distinction between realistic and "gold standard" efficacy studies. The remainder of the book addresses salient issues such as conducting research in various cultures, operating an empirically-oriented practice, and performing research with families, children, and the elderly. Students and professors will find the coverage ample and penetrating, without being too overwhelming.

The Boston Process Approach to neuropsychological assessment, advanced by Edith Kaplan, has a long and well-respected history in the field. However, its theoretical and empirical support has not previously been assembled in an easily accessible format. This volume fills that void by compiling the historical, empirical, and practical teachings of the Process Approach. The reader will find a detailed history of the precursors to this model of thought, its development through its proponents such as Harold Goodglass, Nelson Butters, Laird Cermak, and Norman Geschwind, and its continuing legacy. The second section provides a guide to applying the Boston Process Approach to some of the field's most commonly used measures, such as the various Wechsler Intelligence Scales, the Trail Making Test, the California Verbal Learning Test, and the Boston Naming Test. Here, the reader will find a detailed history of the empirical evidence for test administration and interpretation using Boston Process Approach tenets. The final section of the book provides various perspectives on the implementation of the Boston Process Approach in various clinical and research settings and with specialized

populations.

Practical and comprehensive, this is the first book to focus on noncredible performance in clinical contexts. Experts in the field discuss the varied causes of invalidity, describe how to efficiently incorporate validity tests into clinical evaluations, and provide direction on how to proceed when noncredible responding is detected. Thoughtful, ethical guidance is given for offering patient feedback and writing effective reports. Population-specific chapters cover validity assessment with military personnel; children; and individuals with dementia, psychiatric disorders, mild traumatic brain injury, academic disability, and other concerns. The concluding chapter describes how to appropriately engage in legal proceedings if a clinical case becomes forensic. Case examples and sample reports enhance the book's utility.

This book provides users of the Wechsler Adult Intelligence Scale (WAIS-IV) with information on applying the WAIS-IV, including additional indexes and information regarding use in special populations for advanced clinical use and interpretation. The

book offers sophisticated users of the WAIS-IV and Wechsler Memory Scale (WMS-IV) guidelines on how to enhance the clinical applicability of these tests. The first section of the book provides an overview of the WAIS-IV, WMS-IV, and new Advanced Clinical Solutions for Use with the WAIS-IV/WMS-IV (ACS). In this section, examiners will learn: Normal versus atypical score variability Low-score prevalence in healthy adults versus clinical populations Assessing whether poor performance reflects a decline in function or is the result of suboptimal effort New social cognition measures found in the ACS are also presented. The second part focuses on applying the topics in the first section to specific clinical conditions, including recommended protocols for specific clientele (e.g. using demographically adjusted norms when evaluating individuals with brain injury). Common clinical conditions are discussed, including Alzheimer's disease, mild cognitive impairment, traumatic brain injury, and more. Each chapter provides case examples applying all three test batteries and using report examples as they are obtained from the scoring assistant. Finally, the use of the WAIS-IV/WMS-IV and the ACS in forensic settings is presented. Major developments in the field since the publication of *Learning Forensic Assessment* are integrated in this revised edition, including revised editions of the DSM-5, HCR-20 scale, and child custody guidelines. This textbook is designed for graduate students learning forensic assessment and psychologists coming to forensic practice later in their careers. It is organized around five broad areas: Professional and Practice Issues, Adult Forensic Assessment, Juvenile Forensic Assessment, Civil Forensic Assessment, and Communicating Your Findings. Each chapter begins with a strong teaching and learning foundation. The latter part of each chapter is assessment specific, covering available assessment measures and approaches to assessment. The authors go well beyond simple descriptions of assessment measures and provide a conceptual discussion of the evaluation process that helps the reader understand how assessment measures fit into the overall evaluation process. The evaluation component is geared toward assessing the important aspects of the construct as laid out in the early part of each chapter. Each chapter then concludes with a case example to illustrate the measures and techniques described.

Forensic mental health assessment (FMHA) has grown into a specialization informed by research and professional guidelines. This series presents up-to-date information on the most important and frequently conducted forms of FMHA. The 19 topical volumes address best approaches to practice for particular types of evaluation in the criminal, civil, and juvenile/family areas. Each volume contains a thorough discussion of the relevant legal and psychological concepts, followed by a step-by-step description of the assessment process from preparing for the evaluation to writing the report and testifying in court. Volumes include the following helpful features: Boxes that zero in on important information for use in evaluations Tips for best practice and cautions against common pitfalls Highlighting of relevant case law and statutes Separate list of assessment tools for easy reference Helpful glossary of key terms for the particular topic In making recommendations for best practice, authors consider empirical support, legal relevance, and consistency with ethical and professional standards. These

volumes offer invaluable guidance for anyone involved in conducting or using forensic evaluations. This book considers those legal, ethical and assessment issues that arise when forensic mental health professionals are asked to evaluate the capacity of adults to make independent decisions about the management of their personal and financial affairs. As our population ages, the competence of those who are elderly and mentally infirmed may be challenged more and more frequently, and this book will be an invaluable resource for those involved in assessing that competence.

With increasing frequency neuropsychologists are being asked to serve as experts in court cases where judgements must be made as to the cause of, and prognosis for brain diseases and injuries. This book describes the application of neuropsychology to legal issues in both the civil and criminal courts. It emphasizes a scientific basis of neuropsychology. All of the contributors are recognized as scientist-clinicians. The chapters cover common forensic issues such as appropriate scientific reasoning, the assessment of malingering, productive attorney-neuropsychologist interactions, and ethics. Also, covered are the determination of damages in personal injury litigation, including pediatric brain injury, mild, moderate, and severe traumatic brain injury in adults (with an introduction to life care planning); neurotoxic injury; and forensic assessment of medically unexplained symptoms. Civil competencies in the elderly persons with dementia are addressed a separate chapter, and two chapters deal with the assessment of competency and responsibility in criminal forensic neuropsychology. This volume will be an invaluable resource for neuropsychologists, attorneys, neurologists, clinical psychologists, psychiatrists, and their students and trainees.
